Lecture Quiz Maker

281452 Chinami Tani

TASK - a quiz maker for lecture-note

What: a small web app. Drop in a lecture-note PDF and it writes a practice test on that lecture (multiple-choice and short-answer questions with an answer key)

Why it's useful: exam prep from my own notes, not the whole internet; a test I can take the night before class

How a round goes:

① The user uploads a lecture-note PDF.

② The app extracts the text and splits it into chunks (one topic each).

③ The user picks the number of questions (e.g. 10).

④ The LLM writes one question per chunk, with the answer and the page it came from.

⑤ The user takes the test; the app shows the score and explanations.

PLAN - Claude Code & Claude Sonnet

Coding agent:

Harness: Claude Code (terminal-based; writes, runs and tests the code)

Build model: Claude Sonnet 5 (drives Claude Code Pro subscription)

LLM inside the app: Claude Haiku 4.5 via the Claude API

Stack: Python + Streamlit(UI) + pypdf(Extract text from a PDF)

Run & cost: building runs on a Claude Pro plan (paid, optional per the spec), the app costs cents per test on Haiku.

Evaluation: run it on my class slides and check 20-50 questions by hand “is each one answerable from the notes, and is the key correct?”
